Risk Science Nov 04 2022 Risk science is becoming increasingly important as businesses, policymakers and public sector leaders are tasked with decision-making and investment using varying levels of knowledge and information. Risk Science: An Introduction explores the theory and practice of risk science, providing concepts and tools for understanding and acting under conditions of uncertainty. The chapters in this work cover the fundamental concepts, principles, approaches, methods and models for how to understand, assess, communicate, manage and govern risk. These topics are presented and examined in a way which details how they relate, for example, how to characterize and communicate risk with particular emphasis on reflecting uncertainties; how to distinguish risk perception and professional risk judgments; how to assess risk and guide decision-makers, especially for cases involving large uncertainties and value differences; and how to integrate risk assessment with resilience-based strategies. The text provides a variety of examples and case studies that relate to highly visible and relevant issues facing risk academics, practitioners and non-risk leaders who must make risk-related decisions. Presenting both the foundational and most recent advancements in the subject matter, this work particularly suits students of risk science courses at college and university level.

The book also provides broader key reading for students and scholars in other domains, including business, engineering and public health.

Not Working Oct 03 2022 'To do nothing at all is the most difficult thing in the world.' Oscar Wilde More than ever before, we live in a culture that excoriates inactivity and demonizes idleness. Work, connectivity and a constant flow of information are the cultural norms, and a permanent busyness pervades even our quietest moments. Little wonder so many of us are burning out. In a culture that tacitly coerces us into blind activity, the art of doing nothing is disappearing. Inactivity can induce lethargy and indifference, but is also a condition of imaginative freedom and creativity. Psychoanalyst Josh Cohen explores the

paradoxical pleasures of inactivity, and considers four faces of inertia - the burnout, the slob, the daydreamer and the slacker. Drawing on his personal experiences and on stories from his consulting room, while punctuating his discussions with portraits of figures associated with the different forms of inactivity - Andy Warhol, Orson Welles, Emily Dickinson and David Foster Wallace - Cohen gets to the heart of the apathy so many of us feel when faced with the demands of contemporary life, and asks how we might live a different and more fulfilled existence.
