BASIC BUSINESS AND ADMINISTRATIVE COMMUNICATION Oct 24 2019 This book, Basic Business and Administrative Communication, is written with the ultimate aim of providing readers with basic business communication and administrative concepts. The book considers communication as a vital tool to the success of every business, and therefore presents in-depth coverage of the following topics: • Overview of communication • Models of communication • Context, levels, media, and barriers to communication • Lines of communication • Oral communication • Non-verbal communication • Listening in business communication • Essentials of effective business writing • Written communication • Job hunting, preparing resumes and interview guidelines • Meetings as an administrative function in organisations • Requisites of valid meetings • Roles of the secretary and chairperson at meetings • Report writing • The role of information communication technology in business communication The author recognises the importance of skill development and provides practical examples of business documents such as business letters, memos, and itinerary that readers can follow to create their own to maximise their effectiveness and contribute to

organisational success. The book is essential reading material for undergraduate and higher national diploma business students.

Remote Sensing Image Fusion Jul 13 2021 Remote Sensing Image Fusion: A Practical Guide gives an introduction to remote sensing image fusion providing an overview on the sensors and applications. It describes data selection, application requirements and the choice of a suitable image fusion technique. It comprises a diverse selection of successful image fusion cases that are relevant to other users and other areas of interest around the world. The book helps newcomers to obtain a quick start into the practical value and benefits of multi-sensor image fusion. Experts will find this book useful to obtain an overview on the state of the art and understand current constraints that need to be solved in future research efforts. For industry professionals the book can be a great introduction and basis to understand multisensor remote sensing image exploitation and the development of commercialized image fusion software from a practical perspective. The book concludes with a chapter on current trends and future developments in remote sensing image fusion. Along with the book, RSIF website provides additional up-to-date information in the field.

Automated Deduction - CADE-25 Aug 02 2020 This book constitutes the proceedings of the 25th International Conference on Automated Deduction, CADE-25, held in Berlin, Germany, in August 2015. The 36 revised full papers presented (24 full papers and 12 system descriptions) were carefully reviewed and selected from 85 submissions. CADE is the major forum for the presentation of research in all aspects of automated deduction, including foundations, applications, implementations and practical experience.

Realistic Decision Theory Sep 03 2020 Within traditional decision theory, common decision principles -- e.g. the principle to maximize utility -- generally invoke idealization; they govern ideal agents in ideal circumstances. In Realistic Decision Theory, Paul Weirich adds practicality to decision theory by formulating principles applying to nonideal agents in nonideal circumstances, such as real people coping with complex decisions. Bridging the gap between normative demands and psychological resources, Realistic Decision Theory is essential reading for theorists seeking precise normative decision principles that acknowledge the limits and difficulties of human decision-making.

Great Expectations, Slow Transformation Nov 24 2019 In the aftermath of the financial crisis, why has the reform process been incremental yet the conditions for more rapid and abrupt transformations appeared to be available? Is there anything specific about financial policy that prevents more radical reforms? Drawing from Comparative Politics and Historical Institutionalism in particular, as well as International Political Economy, this book answers these questions by examining the particular institutional frictions that characterise global financial governance and influence the activity of change agents and veto players involved

in the process of global regulatory change. The chapters in this volume collectively demonstrate that the process of change in financial rule-making as well as in the institutions governing finance does not fit with the punctuated model of policy change. The book also shows, however, that incremental changes can lead to fundamental shifts in the basic principles that inform global financial governance.

Super-Resolution Microscopy Apr 10 2021 This unique book on super-resolution microscopy techniques presents comparative, in-depth analyses of the strengths and weaknesses of the individual approaches. It was written for non-experts who need to understand the principles of super-resolution or who wish to use recently commercialized instruments as well as for professionals who plan to realize novel microscopic devices. Explaining the practical requirements in terms of hardware, software and sample preparation, the book offers a wealth of hands-on tips and practical tricks to get a setup running, provides invaluable help and support for successful data acquisition and specific advice in the context of data analysis and visualization. Furthermore, it addresses a wide array of transdisciplinary fields of applications. The author begins by outlining the joint efforts that have led to achieving super-resolution microscopy combining advances in single-molecule photo-physics, fluorophore design and fluorescent labeling, instrument design and software development. The following chapters depict and compare current main standard techniques such as structured illumination microscopy, single-molecule localization, stimulated emission depletion microscopy and multi-scale imaging including light-sheet and expansion microscopy. For each individual approach the experimental setups are introduced, the imaging protocols are provided and the various applications illustrated. The book concludes with a discussion of future challenges addressing issues of routine applications and further commercialization of the available methods. Guiding users in how to make choices for the design of their own experiments from scratch to promising application, this one-stop resource is intended for researchers in the applied sciences, from chemistry to biology and medicine to physics and engineering.

Public Enterprise Management And Privatisation Dec 18 2021 A number of public enterprise (PE) executives have long felt the need for a book which would provide necessary information and analysis of various dimensions of PE management and privatisation. The book provides at one place, a precise and authoritative account of the concept, policy, and analysis of major issues confronting PEs. Public ownership per se does not make PE performance sub-optimal. The operation of the Government system, of which PE is a sub-system, has not been conducive to performance. During the last six decades, inadequate political will and vested interests have come in the way of freeing PEs from excessive and throttling controls, and demoralising accountability. Not letting the managers manage with the freedom required in the liberalised and globalised set-up is the problem. The multifarious and complex managerial problems of PEs, which get compounded by faltering moves towards privatisation, cannot be wished away. These have been considered in the book at some length. The book, first published in 1980, continues to be a standard work on the subject. This latest edition has been revised by Dr. R.K.Mishra, Director, Institute of Public Enterprise, Hyderabad.

3D Math Primer for Graphics and Game Development May 11 2021 This engaging book presents the essential mathematics needed to describe, simulate, and render a 3D world. Reflecting both academic and in-the-trenches practical experience, the authors teach you how to describe objects and their positions, orientations, and trajectories in 3D using mathematics. The text provides an introduction to mathematics for

Introduction to Singularities Feb 20 2022 This book is an introduction to singularities for graduate students and researchers. It is said that algebraic geometry originated in the seventeenth century with the famous work *Discours de la méthode pour bien conduire sa raison, et chercher la vérité dans les sciences* by Descartes. In that book he introduced coordinates to the study of geometry. After its publication, research on algebraic varieties developed steadily. Many beautiful results emerged in mathematicians' works. Most of them were about non-singular varieties. Singularities were considered "bad" objects that interfered with knowledge of the structure of an algebraic variety. In the past three decades, however, it has become clear that singularities are necessary for us to have a good description of the framework of varieties. For example, it is impossible to formulate minimal model theory for higher-dimensional cases without singularities. Another example is that the moduli spaces of varieties have natural compactification, the boundaries of which correspond to singular varieties. A

remarkable fact is that the study of singularities is developing and people are beginning to see that singularities are interesting and can be handled by human beings. This book is a handy introduction to singularities for anyone interested in singularities. The focus is on an isolated singularity in an algebraic variety. After preparation of varieties, sheaves, and homological algebra, some known results about 2-dimensional isolated singularities are introduced. Then a classification of higher-dimensional isolated singularities is shown according to plurigenera and the behavior of singularities under a deformation is studied.

Demystifying Climate Models Nov 17 2021 This book demystifies the models we use to simulate present and future climates, allowing readers to better understand how to use climate model results. In order to predict the future trajectory of the Earth's climate, climate-system simulation models are necessary. When and how do we trust climate model predictions? The book offers a framework for answering this question. It provides readers with a basic primer on climate and climate change, and offers non-technical explanations for how climate models are constructed, why they are uncertain, and what level of confidence we should place in them. It presents current results and the key uncertainties concerning them. Uncertainty is not a weakness but understanding uncertainty is a strength and a key part of using any model, including climate models. Case studies of how climate model output has been used and how it might be used in the future are provided. The ultimate goal of this book is to promote a better understanding of the structure and uncertainties of climate models among users, including scientists, engineers and policymakers.

Promoting Justice, Human Rights and Conflict Resolution through International Law / La promotion de la justice, des droits de l'homme et du règlement des conflits par le droit international Oct 16 2021 This Liber Amicorum is published at the occasion of Judge Lucius Caflisch's retirement from a distinguished teaching career at the Graduate Institute of International Studies of Geneva, where he served as Professor of International Law for more than three decades, and where he has also held the position of Director. It was written by his colleagues and friends, from the European Court of Human Rights, from universities all around the world, from the Swiss Foreign Affairs Ministry and many other national and international institutions. The Liber Amicorum Lucius Caflisch covers different fields in which Judge Caflisch has excelled in his various capacities, as scholar, representative of Switzerland in international conferences, legal adviser of the Swiss Foreign Affairs Ministry, counsel, registrar, arbitrator and judge. This collective work is divided into three main sections. The first section examines questions concerning human rights and international humanitarian law. The second section is devoted to the international law of spaces, including matters regarding the law of the sea, international waterways, Antarctica, and boundary and territorial issues. The third section addresses issues related to the peaceful settlement of disputes, both generally and with regard to any particular means of settlement. The contributions are in both English and French.

Moral Issues in Global Perspective - Volume 2: Human Diversity and Equality - Second Edition Nov 05 2020 Now available in three thematic volumes, the second edition of Moral Issues in Global Perspective is a collection of the newest and best articles on current moral issues by moral and political theorists from around the globe. Each volume seeks to challenge the standard approaches to morality and moral issues shaped by Western liberal theory and to extend the inquiry beyond the context of North America. Covering a broad range of issues and arguments, this collection includes critiques of traditional liberal accounts of rights, justice, and moral values, while raising questions about the treatment of disadvantaged groups within and across societies affected by globalization. Providing new perspectives on issues such as war and terrorism, reproduction, euthanasia, censorship, and the environment, each volume of Moral Issues in Global Perspective incorporates work by race, class, feminist, and disability theorists. Human Diversity and Equality, the second of the three volumes, examines issues of equality and difference and the effects, within and across borders, of kinds of discrimination on the basis of race, ethnicity, gender, disability, class, and sexual orientation. Nine essays are new, four of which were written especially for this volume. Moral Issues in Global Perspective is available in three separate volumes—Moral and Political Theory, Human Diversity and Equality, and Moral Issues.

Logic and Foundations of Mathematics Apr 22 2022 The IOth International Congress of Logic, Methodology and Philosophy of Science, which took place in Florence in August 1995, offered a vivid and comprehensive picture of the present state of research in all directions of Logic and Philosophy of Science. The final program counted 51 invited lectures and around 700 contributed papers, distributed in 15 sections. Following the tradition of previous LMPS-meetings, some authors, whose papers aroused particular interest, were invited to submit their works for publication in a collection of selected contributed papers. Due to

the large number of interesting contributions, it was decided to split the collection into two distinct volumes: one covering the areas of Logic, Foundations of Mathematics and Computer Science, the other focusing on the general Philosophy of Science and the Foundations of Physics. As a leading choice criterion for the present volume, we tried to combine papers containing relevant technical results in pure and applied logic with papers devoted to conceptual analyses, deeply rooted in advanced present-day research. After all, we believe this is part of the genuine spirit underlying the whole enterprise of LMPS studies.

An Invitation To Noncommutative Geometry Mar 09 2021 This is the first existing volume that collects lectures on this important and fast developing subject in mathematics. The lectures are given by leading experts in the field and the range of topics is kept as broad as possible by including both the algebraic and the differential aspects of noncommutative geometry as well as recent applications to theoretical physics and number theory.

Company Law in East Asia Jan 07 2021 First published in 1999, this volume provides an overview of company laws in South East Asia, North East Asia and the Pacific. The chapters adopt a standard format to allow for comparisons to be made as well as highlighting key features of company laws in each jurisdiction. The contributors are experts in their fields and present practical and policy related insights. The book also contains some useful overviews of company law themes in Asia.

Singularity Theory Feb 08 2021 The Singularity School and Conference took place in Luminy, Marseille, from January 24th to February 25th 2005. More than 180 mathematicians from over 30 countries converged to discuss recent developments in singularity theory. The volume contains the elementary and advanced courses conducted by singularities specialists during the conference, general lectures on singularity theory, and lectures on applications of the theory to various domains. The subjects range from geometry and topology of singularities, through real and complex singularities, to applications of singularities.

The Linguistic Analysis of Jokes Jan 19 2022 This book starts from three observations. First, the use of humour is a complex, puzzling, and idiosyncratically human form of behaviour (and hence is of scientific interest). Second, there is currently no theory of how humour works. Third, one useful step towards a theory of humour is to analyze humorous items in precise detail, in order to understand their mechanisms. The author begins by considering how to study jokes rigorously: the assumptions to make, the guidelines to follow and the pitfalls to avoid. A critique of other work on humour is also provided. This introduces some important concepts, and also demonstrates the lack of agreement about what a theory of humour should look like. The language devices used in various jokes, such as puns or humour based on misinterpretation, are analysed in detail. The central part of the book develops, and demonstrates, proposals for how best to analyze the workings of simple jokes. Finally, the author makes some general suggestions about the language devices that seem to be central to the construction of jokes. *The Linguistic Analysis of Jokes* will be invaluable for researchers and advanced students of humour research, linguistics and cognitive science.

Automated Deduction - CADE-17 Jul 01 2020 For the past 25 years the CADE conference has been the major forum for the presentation of new results in automated deduction. This volume contains the papers and system descriptions selected for the 17th International Conference on Automated Deduction, CADE-17, held June 17-20, 2000, at Carnegie Mellon University, Pittsburgh, Pennsylvania (USA). Fifty-three research papers and twenty system descriptions were submitted by researchers from fifteen countries. Each submission was reviewed by at least three reviewers. Twenty-four research papers and fifteen system descriptions were accepted. The accepted papers cover a variety of topics related to theorem proving and its applications such as proof carrying code, cryptographic protocol verification, model checking, cooperating decision procedures, program verification, and resolution theorem proving. The program also included three invited lectures: "High-level verification using theorem proving and formalized mathematics" by John Harrison, "Scalable Knowledge Representation and Reasoning Systems" by Henry Kautz, and "Connecting Bits with Floating-Point Numbers: Model Checking and Theorem Proving in Practice" by Carl Seger. Abstracts or full papers of these talks are included in this volume. In addition to the accepted papers, system descriptions, and invited talks, this volume contains one page summaries of four tutorials and five workshops held in conjunction with CADE-17.

Reaching for Higher Ground in Conflict Resolution May 23 2022 Offers examples and practical advice on guiding groups to articulate their common values, develop the principles that will guide their efforts, and clarify shared expectations.

The Menshevik Leaders in the Russian Revolution Apr 29 2020 At the end of February 1917 the tsarist government of Russia collapsed in a whirlwind of demonstrations by the workers and soldiers of Petrograd. Ziva Galili tells how the moderate socialists, or Mensheviks, then attempted to prevent the conflicts between the newly formed liberal Provisional Government (the "bourgeois" camp) and the Petrograd Soviet (the "democratic" camp) from escalating into civil war--and how, in October of that same year, they finally failed. Placing narrative history in a broad social and political context, she creates an absorbing study of idealists who tried in vain to reflect as well as to contain the unfolding revolutionary process. Galili focuses on the Menshevik Revolutionary Defensists who became the leaders of the Petrograd Soviet and of the all-Russian network of soviets. She examines Menshevik political strategy as well as the three-way interaction between Mensheviks (both in the Soviet and the Provisional Government), workers, and industrialists. She emphasizes the perceptual and interactive aspects of the analysis of revolutions: the relations between social realities, perceptions of realities, and the formulation of political strategies; the roles of rhetoric and societal conflict in shaping social identities; and the impact of political authority and state institutions on the terms of social interaction. Ziva Galili is Associate Professor of History at Rutgers University. She is coeditor and annotator of *The Making of Three Russian Revolutions: Voice from the Menshevik Past* (Cambridge). Studies of the Harriman Institute, Columbia University. Originally published in 1989. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Example-Based Super Resolution Oct 28 2022 Example-Based Super Resolution provides a thorough introduction and overview of example-based super resolution, covering the most successful algorithmic approaches and theories behind them with implementation insights. It also describes current challenges and explores future trends. Readers of this book will be able to understand the latest natural image patch statistical models and the performance limits of example-based super resolution algorithms, select the best state-of-the-art algorithmic alternative and tune it for specific use cases, and quickly put into practice implementations of the latest and most successful example-based super-resolution methods. Provides detailed coverage of techniques and implementation details that have been successfully introduced in diverse and demanding real-world applications. Covers a wide variety of machine learning approaches, ranging from cross-scale self-similarity concepts and sparse coding, to the latest advances in deep learning. Presents a statistical interpretation of the subspace of natural image patches that transcends super resolution and makes it a valuable source for any researcher on image processing or low-level vision.

Calorimetry In High Energy Physics - Proceedings Of The 2nd International Conference Jun 19 2019 This book lays the foundations of the theory of

fluctuating multivalued fields with numerous applications. Most prominent among these are phenomena dominated by the statistical mechanics of line-like objects, such as the phase transitions in superfluids and superconductors as well as the melting process of crystals, and the electromagnetic potential as a multivalued field that can produce a condensate of magnetic monopoles. In addition, multivalued mappings play a crucial role in deriving the physical laws of matter coupled to gauge fields and gravity with torsion from the laws of free matter. Through careful analysis of each of these applications, the book thus provides students and researchers with supplementary reading material for graduate courses on phase transitions, quantum field theory, gravitational physics, and differential geometry.

3D Shape Analysis Dec 26 2019 An in-depth description of the state-of-the-art of 3D shape analysis techniques and their applications This book discusses the different topics that come under the title of "3D shape analysis". It covers the theoretical foundations and the major solutions that have been presented in the literature. It also establishes links between solutions proposed by different communities that studied 3D shape, such as mathematics and statistics, medical imaging, computer vision, and computer graphics. The first part of 3D Shape Analysis: Fundamentals, Theory, and Applications provides a review of the background concepts such as methods for the acquisition and representation of 3D geometries, and the fundamentals of geometry and topology. It specifically covers stereo matching, structured light, and intrinsic vs. extrinsic properties of shape. Parts 2 and 3 present a range of mathematical and algorithmic tools (which are used for e.g., global descriptors, keypoint detectors, local feature descriptors, and algorithms) that are commonly used for the detection, registration, recognition, classification, and retrieval of 3D objects. Both also place strong emphasis on recent techniques motivated by the spread of commodity devices for 3D acquisition. Part 4 demonstrates the use of these techniques in a selection of 3D shape analysis applications. It covers 3D face recognition, object recognition in 3D scenes, and 3D shape retrieval. It also discusses examples of semantic applications and cross domain 3D retrieval, i.e. how to retrieve 3D models using various types of modalities, e.g. sketches and/or images. The book concludes with a summary of the main ideas and discussions of the future trends. 3D Shape Analysis: Fundamentals, Theory, and Applications is an excellent reference for graduate students, researchers, and professionals in different fields of mathematics, computer science, and engineering. It is also ideal for courses in computer vision and computer graphics, as well as for those seeking 3D industrial/commercial solutions.

Commercial Conflict Management and Dispute Resolution Mar 21 2022 Commerce is inherently complex and the sums of money involved can be astronomical, so it is no surprise that conflicts and disputes are all too common. There are numerous techniques designed to resolve these problems, and this book summarizes the most important of these, as well as alternative dispute resolution methods. The reader seeking a deeper understanding of these procedures will also find clear explanations of the principles and methods for conflict management, such as negotiation, risk management, mediation and conciliation. As well as outlining these different techniques, guidance on which approach is appropriate in common situations is also given, helping the reader apply what they have learned to the real world. The significance of cultural issues is explained, before the reader is presented with suggestions for how to take these into account. Throughout, the book is illustrated with case studies from examples as diverse as Mumbai's DabbaWalla, The First World War and Terminal 5 at London Heathrow. Written with undergraduate students in mind, this book also serves to give a neat and brief overview for professionals. Those studying or working in commerce generally, construction project management, construction management, and construction law will find this to be an invaluable book.

Principles and Practice of Constraint Programming - CP 2001 Aug 14 2021 This book constitutes the refereed proceedings of the 7th International Conference on Principles and Practice of Constraint Programming, CP 2001, held in Paphos, Cyprus, in November/December 2001. The 37 revised full papers, 9 innovative applications presentations, and 14 short papers presented were carefully reviewed and selected from a total of 135 submissions. All current issues in constraint processing are addressed, ranging from theoretical and foundational issues to advanced and innovative applications in a variety of fields.
