Why Study Biology by the Sea? Jun 16 2021 For almost a century and a half, biologists have gone to the seashore to study life. The oceans contain rich biodiversity, and organisms at the intersection of sea and shore provide a plentiful sampling for research into a variety of questions at the laboratory bench: How does life develop and how does it function? How are organisms that look different related, and what role does the environment play? From the Stazione Zoologica in Naples to the Marine Biological Laboratory in Woods Hole, the Amoy Station in China, or the Misaki Station in Japan, students and researchers at seaside research stations have long visited the ocean to investigate life at all stages of development and to convene discussions of biological discoveries. Exploring the history and current reasons for study by the sea, this book examines key people, institutions, research projects, organisms selected for study, and competing theories and interpretations of discoveries, and it considers different ways of understanding research, such as through research repertoires. A celebration of coastal marine research, *Why Study Biology by the Sea?* reveals why scientists have moved from the beach to the lab bench and back.

Asking Questions in Biology Sep 07 2020 Biology students need to be able to analyse data and produce high quality practical reports. These skills are essential for success in assessments, examinations and project work. *Asking Questions in Biology* will help you to master the practical and data handling elements of your course, while teaching you a fundamental skill in scientific discovery. Tried and tested with students, this unique text explains: v Why asking the right questions is essential in any scientific enquiry v How to design experiments and project work v How to approach analysing data, using principles that apply with any statistical package v How to present your results including figures and tables Features include: v Self-test questions and answers v An easy-to-use Quick Test Finder v Key topics are illustrated with a wide range of examples from ecology and behaviour to toxicology and parasitology. This second edition continues to provide an invaluable text for practical courses in biology. It is especially useful for courses that emphasise hypothesis testing and data analysis, and as a guide for students working on assessed projects. Chris Barnard is Professor of Animal Behaviour and Francis Gilbert is Senior Lecturer in Ecology both at the University of Nottingham. Peter McGregor is Head of the Department of Animal Behaviour in the Zoological Institute at the University of Copenhagen.
