Heart of Listening Oct 09 2020 This deluxe hardcover editions contains both Volume I and II of The Heart of Listening. Milne, a third generation Scottish osteopath, begins by explaining the visionary approach to healing, and how it may be applied to the realm of craniosacral work. He explains the importance of meditation, centering, and the cultivation of heartfulness in the development of compassionate practice. Milne introduces the reader to the story of visionary work—its genesis, evolution, philosophy, and practice—and explains how a grounding in meditation, sensitive touch, and intuitive perception can lead to a remarkable unfoldment in skill development. In the second volume, Milne details the anatomy, physiology, energetics, and techniques that are the essential core of visionary craniosacral work. His particular genius lies in his ability to weave a delicate tapestry of narrative, poetry, and scientific fact into a fascinating and insightful exposition of the visionary healing arts.

Sleep Medicine and the Evolution of Contemporary Sleep Pharmacotherapy Feb 10 2021 Sleep is a fundamental physiological feature experienced by all known mammalian, and most non-mammalian, species. Underscoring its importance is the wide array of neural and cellular processes that have evolved to govern when and how it occurs, its duration, sequence of phases, and the influence it exerts on numerous other brain functions. This book takes up the growing prevalence of sleep disorders affecting these processes and the panorama of pharmaceutical tools that have evolved for their medical care. Its wide-ranging discussion promises not only recent updates on their clinical management but a contemporary window into sleep's cross-cutting relevance for the many neurological dysfunctions now known to associate with sleep disturbances.

Drowning by Accident Mar 02 2020 Drowning By Accident explains why it is so easy to drown, where accidents happen, and how to save lives by early rescue and resuscitation. More than 600 people die by drowning in Britain every year. Swimming is promoted as a particularly safe form of exercise, so that swimmers forget or ignore the dangers of frigid lakes, swollen rivers, incoming tides or outgoing rip currents. Drowning accidents take place because we don't recognise water as a hostile environment. We overestimate the strength and endurance of our bodies and underestimate the power and deceptiveness of water. Year after year, victims lose their lives in typical drowning accidents, often sinking so quickly and silently that nearby family, friends and onlookers fail to notice the tragedy taking place close beside them. Babies drown in baths. Toddlers drown in garden ponds. School children fall off rafts. Teenagers strike too far from the shore. Pensioners wade into rivers to save their dogs. Victims often die within minutes of sinking beneath the surface. A quarter of those who reach hospital alive will also die, while others survive with severe permanent brain damage. This means that it is vitally important for parents, grandparents, teachers, lifeguards and lawmakers to recognise the risks and prevent drowning accidents before they take place.
