*Economics of Immigration Jun 07 2020 Poverty, famines, wars, and ethnic conflicts lead to large movements of refugees. The papers in this book provide an analysis of the economics of immigration. Junankar discusses why people migrate, the likely destinations for migrants, and their employment in the destination countries. He studies the benefits to the migrant families in terms of higher wages and living standards, and also studies how immigrants fare in the Australian labour markets in terms of finding good jobs, and whether there is discrimination against them. Economics of Immigration analyses the macroeconomic impacts of immigration on the Australian economy and discusses why some groups favour immigration while other groups are against it. Junankar argues immigration has been beneficial for employment and growth; not only adding to labour supply but also to labour demand, hence leading to favourable outcomes. This collection of essays shows how immigration has helped the economic development of Australia, while also highlighting that the historical reasons for immigration lie in the colonisation of many countries in Asia and Africa.*

*Macroeconomic Policy Frameworks for Resource-Rich Developing Countries - Background Paper 1 Oct 24 2021 This paper provides deeper insights on a few themes with regard to the experience with macroeconomic management in resource-rich developing countries (RRDCs). *Competitiveness and Economic Development in Europe Jul 29 2019 The success of an economy to adapt quickly, flexibly, and effectively to the demands of the changing international economic environment can only be investigated using the achievements of other national economies or regions as a benchmark. This book analyzes the fundamental factors of competitiveness, which will, in turn, facilitate economic development and growth, in the new post-crisis environment. In the economic, social, legal, and technological environment that has emerged in recent years, as well as in the period after the recent financial crisis, it is critical to define, assess, and implement new pathways to competitiveness and economic development. The book covers all aspects of competitiveness and economic growth, from financial intermediaries to tourism and the digital economy, and from regulation and corporate governance to exchange rate dynamics and monetary policy issues. It uses empirical findings from a variety of different countries with divergent economic structures and policies. It examines the new system of production, and the technological, commercial, financial and institutional environment, with the aim of recommending a proportional division of benefits and costs of economic growth. It offers a fresh, holistic, and flexible concept to underscore the new relationship between competitiveness and economic growth. Such an approach is needed, whereby competitiveness is no longer a zero-sum game between countries, but is achievable for all countries. The book recommends future directions and offers policy solutions, and as such, will appeal to students, researchers, and policymakers, as well as those interested in the role of competitiveness in the operation of markets, productivity, and economic development, and how it might foster innovation and growth.*
