**Structure Preserving Energy Functions in Power Systems** Apr 13 2021 A guide for software development of the dynamic security assessment and control of power systems, Structure Preserving Energy Functions in Power Systems: Theory and Applications takes an approach that is more general than previous works on Transient Energy Functions defined using Reduced Network Models. A comprehensive presentation of theory and applications, this book: Describes the analytics of monitoring and predicting dynamic security and emergency control through the illustration of theory and applications of energy functions defined on structure preserving models Covers different facets of dynamic analysis of large bulk power systems such as system stability evaluation, dynamic security assessment, and control, among others Supports illustration of SPEFs using examples and case studies, including descriptions of applications in real-time monitoring, adaptive protection, and emergency control Presents a novel network analogy based on accurate generator models that enables an accurate, yet simplified approach to computing total energy as the aggregate of energy in individual components The book presents analytical tools for online detection of loss of synchronism and suggests adaptive system protection. It covers the design of effective linear damping controllers using FACTS, for damping small oscillations during normal operation to prevent transition to emergency states, and emergency control based on FACTS, to improve first swing stability and also provide rapid damping of nonlinear oscillations that threaten system security during major disturbances. The author includes detection and control algorithms derived from theoretical considerations and illustrated through several examples and case studies on text systems.

**The State of Food Insecurity in Lusaka, Zambia** May 15 2021 The Lusaka urban food security survey done by AFSUN as part of its baseline survey of 11 Southern African cities found that up to 93% of the households in the informal settlements, which house three-quarters of the Zambian capital's population, were food insecure. A paltry 8% were food secure. Worse still, most of the households in the informal urban settlements of Lusaka did not only have poor access to food, they also consumed foods from a very narrow range of food groups. Their diets were dominated by cereals and therefore likely to be deficient in essential vitamins, minerals and proteins. The AFSUN survey shows clearly that urban households obtain their food mainly through the market and therefore stable macro-economic conditions are essential to their food security. Since urban household food security is positively associated with levels of income, promotion of decent employment is critical. Among the urgent measures AFSUN recommends to address Lusaka's food insecurity are the promotion by government of decent employment, including labour-intensive public works programmes that would stimulate formal employment, and supplementary feeding programmes in clinics and schools.
