Understanding Institutional Shareholder Activism **Apr 29 2022** Institutional shareholder participation has long been considered as vital to good corporate governance yet its potential does not seem to have been realized. The recent banking crisis exposed the passive role of institutional shareholders, many of whom appear to have chosen to sell their stakes in the banks rather than intervene or challenge the board when they realized the strategies followed by the banks were excessively risky. Institutional shareholders' role to scrutinize and monitor the decisions of boards and executive management in the banking sector in the UK is considered by many to be a failure. In the phenomenon of 'ownerless corporations', as described by Lord Myners. In China, despite the fast rising of institutional investors in the securities market, institutional shareholders have not yet played a contributory role in monitoring corporate managers of listed companies. Drawing on empirical evidence this book seeks to systematically analyse institutional shareholders' incentives to engage in activism to explain when and why shareholder activism will occur. The book puts forward a model which explains the factors that determine institutional shareholders' propensity for activism. The model both elaborates the collective benefits of activism as a means of enhancing managerial accountability asks whether and when shareholder activism is rational for any individual shareholder. The book then goes on to apply these findings to both the UK and China in order to explain the varying levels of shareholder activism in each jurisdiction. This book is the first to take an in-depth look at institutional shareholder activism in China providing prescriptions to promote greater shareholder engagement and exploring the potential it holds for improving corporate governance in the region.

Resolving Foreign Bribery Cases with Non-Trial Resolutions Settlements and Non-Trial Agreements by Parties to the Anti-Bribery Convention **Feb 13 2021** Non-trial resolutions, often referred to as settlements, have been the predominant means of enforcing the Convention on bribery and other related offences since the entry into force of the OECD Anti-Bribery Convention 20 years ago. This study is the first cross-country examination of the differences

Statistics for Real-Life Sample Surveys 2019 Samples used in social and commercial surveys, especially of the general population, are usually less random (often by design) than many people using them realise. Unless it is understood, this 'non-randomness' can compromise the conclusions drawn from the data. This book introduces the challenges posed by less-than-perfect samples, provides background knowledge and practical guidance for those who have to deal with them. It explains why samples are, and sometimes are, non-random in the first place; how to assess the degree of non-randomness; when correction by weighting is appropriate and how to apply it; and how the statistical treatment of these samples must be adapted. Extended data examples show the techniques in action. A good book for practising researchers. It is a reference for the methods and formulae needed to deal with commonly encountered problems. Above all, a source of realistic and implementable solutions.
