*Rational Decisions in*

*Organisations* Feb 24 2022

Managers in organisations must make rational decisions. Rational decision making is the opposite of intuitive decision making. It is a strict procedure utilising objective knowledge and logic. It involves identifying the problem to solve, gathering facts, identifying options and outcomes, analysing them, considering all the relationships and selecting the decision. Rational decision making requires support: methods and software tools. The identification of the problem to solve needs methods that would measure and evaluate the current situation. Identification and evaluation of options and analysis of the available possibilities involves analysis and optimisation methods. Incorporating intuition into rational decision making needs adequate methods that would translate ideas or observed behaviours into hard data. Communication, observation and opinions recording is hardly possible today without adequate software. Information and data that form the input, intermediate variables and the output must be stored, managed and made accessible in a user-friendly manner.

*Rational Decisions in Organisations: Theoretical and Practical Aspects* presents selected recent developments in the support of the widely understood rational decision making in organisations, illustrated through case studies. The book shows not only the variety of perspectives involved in decision making, but also the variety of domains where rational decision support systems are needed. The case studies present decision making by medical doctors, students and managers of various universities, IT project teams, construction companies, banks and small and large manufacturing companies. Covering the richness of relationships in which the decisions should and must be taken, the book illustrates how modern organisations operate in chains and networks; they have multiple responsibilities, including social, legal, business and ethical duties. Nowadays, managers in organisations can make transparent decisions and consider a multitude of stakeholders and their diverse features, incorporating diverse criteria, using multiple types and drivers of information and decision-making patterns, and referring to numerous lessons learned. As the book makes clear, the marriage of theoretical ideas with the possibilities offered by technology can make the decisions in organisations more rational and, at the same time, more human.

### Do We Still Need Peer Review?

Sep 21 2021 The current peer review process is broken and unless changes are made it will soon die. In *Do We Still Need Peer Review?*, author Thomas H.P. Gould examines the evolution of peer review from the earliest attempts by the Church to evaluate scholarly

works to the creation of academic peer review and finally to the current status of the process. Gould argues that without an immediate effort by scholars to institute reform, the future of peer review may cease to exist. As new technology provides authors with a direct, unsupervised

route to publication, the peer review situation is nearing a tipping point, beyond which the nature of academic research will be profoundly altered. This book proposes that rather than tossing out peer review altogether, the process can be saved and made stronger, offering suggestions on how to do just that.
