The Seven Secrets of Crystal Talismans Jan 10 2021 The mysterious powers of gems, crystals, and minerals are finally explained in this practical guide to creating talismans. Casting a modern light on the age-old practice of talismans, gemologist Henry M. Mason correlates the mystical properties of these wondrous objects with the science of gemology. Connecting with the universal life force, the proper talisman can focus and magnify your own qualities—helping you fulfill dreams and desires. Mason's seven secrets explore how crystal structure, color, and chemistry contribute to a talisman's natural energies for aiding in attraction, protection, self-improvement, creativity, tranquility, spiritual awakening, and more. From selecting and preparing the proper mineral to empowering your talisman, this guide takes you through every step of creating and using talismans and amulets for optimum effect.

A Collection of Problems on Mathematical Physics Oct 07 2020 A Collection of Problems on Mathematical Physics is a translation from the Russian and deals with problems and equations of mathematical physics. The book contains problems and solutions. The book discusses problems on the derivation of equations and boundary condition. These Problems are arranged on the type and reduction to canonical form of equations in two or more independent variables. The equations of hyperbolic type concerns derive from problems on vibrations of continuous media and on electromagnetic oscillations. The book considers the statement and solutions of boundary value problems pertaining to equations of parabolic types when the physical processes are described by functions of two, three or four independent variables such as spatial coordinates or time. The book then discusses dynamic problems pertaining to the mechanics of continuous media and problems on electrodynamics. The text also discusses hyperbolic and elliptic types of equations. The book is intended for students in advanced mathematics and physics, as well as, for engineers and workers in research institutions.

Balanced Phono-Amps Jun 22 2019 This book presents the design, analysis and testing of fully balanced RIAA phono amps and measurement tools. The content of this book extends a standard reference about RIAA phono amps "the sound of silence" by Burkhard Vogel. Here, the gap is filled between a semi-balanced engine (RIAA Phono-Amp Engine I) and a fully balanced engine, the RIAA Phono-Amp Engine II. In this new book on hand, "fully balanced" means that each phono-amp stage ends up in a balanced - or in other words symmetrical - solution, differentially amplified. Un-balanced / single-ended solutions are not in the scope.

Foundations of Information and Knowledge Systems Sep 05 2020 This volume contains the papers presented at the "Second International S- posium on Foundations of Information and Knowledge Systems" (FoIKS 2002), which was held in Schloß Salzau, Germany from February 20th to 23rd, 2002.

FoIKS is a biennial event focusing on theoretical foundations of information and knowledge systems. It aims to bring together researchers working on the theoretical foundations of information and knowledge systems and to attract researchers working in mathematical fields such as discrete mathematics, combinatorics, logics, and finite model theory who are interested in applying their theories to research on database and knowledge base theory. FoIKS took up the tradition of the conference series "Mathematical Fundamentals of Database Systems" (MFDBS) which enabled East-West collaboration in the field of database theory. The first FoIKS symposium was held in Burg, Spreewald (Germany) in 2000. Former MFDBS conferences were held in Dresden (Germany) in 1987, Visegrád (Hungary) in 1989, and in Rostock (Germany) in 1991. Proceedings of these previous events were published by Springer-Verlag as volumes 305, 364, 495, and 1762 of the LNCS series. In addition the FoIKS symposium is intended to be a forum for intensive discussions. For this reason the time slot of long and short contributions is 60 and 30 minutes respectively, followed by 30 and 15 minutes for discussions, respectively. Furthermore, participants are asked in advance to prepare as correspondents to a contribution of another author. There are also special sessions for the presentation and discussion of open research problems.
