Code/Space Aug 02 2022 An analysis of the ways that software creates new spatialities in everyday life, from supermarket checkout lines to airline flight paths. After little more than half a century since its initial development, computer code is extensively and intimately woven into the fabric of our everyday lives. From the digital alarm clock that wakes us to the air traffic control system that guides our plane in for a landing, software is shaping our world: it creates new ways of undertaking tasks, speeds up and automates existing practices, transforms social and economic relations, and offers new forms of cultural activity, personal empowerment, and modes of play. In *Code/Space*, Rob Kitchin and Martin Dodge examine software from a spatial perspective, analyzing the dyadic relationship of software and space. The production of space, they argue, is increasingly dependent on code, and code is written to produce space. Examples of code/space include airport check-in areas, networked offices, and cafés that are transformed into workspaces by laptops and wireless access. Kitchin and Dodge argue that software, through its ability to do work in the world, transduces space. Then Kitchin and Dodge develop a set of conceptual tools for identifying and understanding the interrelationship of software, space, and everyday life, and illustrate their arguments with rich empirical material. And, finally, they issue a manifesto, calling for critical scholarship into the production and workings of code rather than simply the technologies it enables—a new kind of social science focused on explaining the social, economic, and spatial contours of software.

Design for Sustainability Feb 02 2020 Design for Sustainability is a practical approach to design which focuses on the challenges and issues faced

by those designing consumer products in the 21st Century. It is written from a design perspective and aimed at both professional and student industrial and product designers, and those involved in managing design. The book begins by summarising the historical and current issues of the environmental debate in the context of sustainable product development, highlighting the benefits gained from considering the impact on the environment and issues of sustainability when designing. The authors answer the questions: What is sustainable product development and why is it important? What are the main drivers of sustainable product development? They explain how design can help to control human impact on the environment by not only minimising pollution, waste, energy use and use of scarce resources, but also by thinking outside the box to create systems and services that can reduce the number of products manufactured. The aim is to put sustainable development within a commercial context and introduce a new focus for design. Design for Sustainability outlines and assesses the methods, tools and techniques available to designers, both for design innovation and design improvement. A wide range of case studies are presented across a number of product sectors including electrical goods, IT and furniture. Initially they demonstrate product improvement and redesign, examples include those that reduce waste, pollution and energy consumption, designing for recycling and reuse of parts. Further examples are then provided exemplifying the more radical approach of system and service design. The final section takes the reader through a whole sustainable design project from start to finish, from brief to manufacture. References and sources of information are also included.

Home Comforts Apr 05 2020 Home Comforts is something new. For the first time in nearly a century, a sole author has written a comprehensive book about housekeeping. This is not a dry how-to manual, nor a collection of odd tips and hints, a cleaning book, a history book, or an arid encyclopedia compiled by a committee or an institute. Home Comforts is a readable explanation for both beginners and experts of all the domestic arts -- choosing fabrics, keeping the piano in tune, caring for books, making a good fire in the fireplace and avoiding chimney fires, ironing and folding, setting up a good reading light, keeping surfaces free of food pathogens, and everything else that modern people might want to do for themselves in their homes. But this reliable and thorough book on the practicalities of housekeeping is also an argument for the importance of private life and the comforts offered by housekeeping. Cheryl Mendelson is a philosopher, lawyer, sometime professor, and a homemaker, wife, and mother. Home Comforts is based on her domestic education, which she acquired while growing up on a farm in the hills of Greene County, in southwestern Pennsylvania, from her grandmothers, aunts, and mother. Learning from the distinct domestic styles of her native Appalachian relatives and her Italian immigrant relatives, she appreciated early on how important domestic customs are to a sense of comfort and identity in life. She writes out of love and respect for her subject, and hopes to inspire others to develop the affection and respect for home life and housework she was fortunate to have learned. Mendelson addresses the meanings as well as the methods of housekeeping with a keen sense of the history and values involved. The result is a warm, good-humored, engagingly written book with a message and a point of view, one that is overflowing with useful reflections and information. The clarity, breadth, and depth of the information collected here are unparalleled. You can read Home Comforts for thoughtful entertainment or use its ample index to help you find the answers to practical domestic questions. There is nothing quite like it. Among this book's unique features: · A skeptical discussion of the excessive use of disinfectants in the home. · How to iron a dress shirt and how to fold sheets. · How to make up a bed with hospital corners. · How to do all basic sewing stitches. · How to choose proper sizes for sheets, tablecloths, and other household linens. · How to set the table for informal and formal meals. · Expert recommendations for safe food storage. · The most exhaustive and reliable information on fabrics, textile fibers, and their laundering, drying, and other care that exists for nonprofessionals. · A thorough explanation of care labels and why and how you should often (carefully) disregard them. · Housekeeping guidelines for people with pets or with allergies. · What to do about dust mites. · How to clean and care for wood, china and crystal, jewelry, ceramic tile, metals, and more. · Guides to stain and spot removal. · Extensive recommendations for improving home safety. · A summary of laws applicable to the home, including privacy, accident liability, contracts, and domestic employees. · 200 Elegant, Clear Drawings ·
