**Japanese Management in Evolution** Jun 01 2020 Japanese Management in Evolution illustrates the significant changes that have been taking place in Japanese business by focusing on "emerging industries" in the relatively neglected service and "creative" sectors as well as other key industries, and to put those changes in historical perspective by providing an overview of business development since World War II. By employing state-of-the-art research techniques and unconventional innovative approaches in analysing Japanese management – including network and discourse analysis, ethnographic explorations, and more – the book reveals historical developments and in-depth analyses of established and emerging composition of sectors and industries where cultural capital matters. Throughout the book, the common theme conveyed to readers is a consistently strong message that the change is ongoing and the evolution of management style is real in the Japanese context. The book would be of great interest to researchers, academics and practitioners in fields of global management, international management, and Asian capitalism.

**A Comparative Analysis of Taxes and CO2 Emissions from Passenger Cars in the Nordic Countries** Dec 27 2019 The report discusses how economic instruments can be used to reduce CO2 emissions from passenger cars in the Nordic countries. The analysis indicate that: the registration tax and the annual circulation tax can contribute to a reduction in the average CO2 emission from new cars; company car schemes in the Nordic countries provide incentives for larger cars and increased driving because of subsidies, and this has long term effect as a large share of new cars are registered as company cars but are used as private cars most of their lives; CO2 differentiated taxes can provide incentives to consumers to purchase CO2 efficient cars; targeted broader packages which besides providing tax incentives also offer advantages to more environmentally friendly cars can be more effective than general tax increases; transparency of targets and instruments is crucial for a large diffusion of CO2 efficient cars.

**Rollover Accident Reconstruction** Sep 28 2022 According to the National Highway Traffic Safety Administration, "of the nearly 9.1 million passenger car, SUV, pickup and van crashes in 2010, only 2.1% involved a rollover. However, rollovers accounted for nearly 35% of all deaths from passenger vehicle crashes. In 2010 alone, more than 7,600 people died in rollover crashes." Rollover accidents continue to be a leading contributor of vehicle deaths. While this continues to be true, it is pertinent to understand the entire crash process. Each stage of the accident provides valuable insight into the application of reconstruction methodologies. Rollover Accident Reconstruction focuses on tripped, single vehicle rollover crashes that terminate without striking a fixed object. Topics featured in this book include: • Analysis methods through various accident phases, including advanced simulation • Vehicle event data recorder usage • Occupant ejection during rollover crash The goal of this title is to break down the various phases of a rollover crash to analyze each stage for use in the reconstruction process - to the greater understanding of crash analysts, consultants and safety engineers alike.
