Hurricane! Nov 27 2019 Hurricane! The Bob Hannah Story is the first book to explore the life of American motocross and Supercross racing's first superstar. From the time he raced the Husquarna he bought with "ones, fives, tens, change; all of my savings," until his retirement at Unadilla in 1989, Bob Hannah won races and championships, spoke his mind, and signed almost every autograph-seeker's program. Told as an oral history by Hannah himself and by those who know him best, this book is full of stories that could only have happened to a character as colorful as the Hurricane. The tale author Tom Madigan tells is the life of an American original, a boy who went from riding dirt bikes in the desert with his father to taking the motocross world by surprise. By the time Hannah retired in 1989, he had collected 70 AMA National wins, seven AMA National titles, a MX des Nations title, and legions of devoted fans. When inducted into the AMA Motorcycle Hall of Fame in 1999, he was second to none in both total and consecutive wins. Richly illustrated, this is the definitive biography of the Hurricane.

Hcci and Cai Engines for the Automotive Industry Sep 05 2020 Homogeneous charge compression ignition (HCCI)/controlled auto-ignition (CAI) has emerged as one of the most promising engine technologies with the potential to combine fuel efficiency and improved emissions performance, offering reduced nitrous oxides and particulate matter alongside efficiency comparable with modern diesel engines. Despite the considerable advantages, its operational range is rather limited and controlling the combustion (timing of ignition and rate of energy release) is still an area of on-going research. Commercial applications are, however, close to reality. HCCI and CAI engines for the automotive industry presents the state-of-the-art in research and development on an international basis, as a one-stop reference work. The background to the development of HCCI / CAI engine technology is described. Basic principles, the technologies and their potential applications, strengths and weaknesses, as well as likely future trends and sources of further information are reviewed in the areas of gasoline HCCI / CAI engines; diesel HCCI engines; HCCI / CAI engines with alternative fuels; and advanced modelling and experimental techniques. The book provides an invaluable source of information for scientific researchers, R&D engineers and managers in the automotive engineering industry worldwide. Presents the state-of-the-art in research and development on an international basis An invaluable source of information for scientific researchers, R&D engineers and managers in the automotive engineering industry worldwide Looks at one of the most promising engine technologies around
