Vedic and Creative Math for Class 2 May 19 2021 It's interesting to see and experience how kids learn. It's also interesting to develop something that kids enjoy. Mathematics is manmade subject. Some kids get it quickly and some of them don't. When we were in school the learning was more Verbal and now days it is more Visual. In fact, kids are more kinaesthetic and they enjoy doing and feeling something all the time. Due to this some kids don't enjoy school. Math is an abstract topic and it's also challenging to develop interesting activities for math. Traditional Indian math was action based and has few activity-based methods. Therefore, I have also included few Vedic methods in this course. Because such methods also link children to Vedic math, this may help to transition easily to mental math. If your son or daughter is hyper active then he might enjoy activities more than anything else. Similarly, if your kid is Shy then she might want to experience more. Therefore, for both such kids, activity-based learning is essential. This book is totally activity based and may suit to such kids very well. Every arithmetic operation is done using some activity like drawing or acting. Some of the activities are also paper based. Caution has been taken to ensure that you may cover all the activities with things easily available at home so you need not buy anything specific for these activities. I also added mental math methods in the program to introduce the children to mental math. This book also covers tips and tricks for International Math Olympiad or IMO. It is best suited for kids in class 2. The book mainly consists of simple and easy methods of addition, subtraction, multiplication and basic division. This book also covers multiplication tables. Addition and subtraction is covered up to 4 digits. Multiplication tables are covered till 10 and multiplication of 2-digit numbers is covered as well. Division by numbers up to 10 is covered. I am confident that this is fun and joyful journey to all the students and their parents. I wish you all the best for more love towards mathematics.

Project Identification Jul 29 2019 Organizations of every type struggle to remain relevant in their marketplace. They continuously strive to introduce new products and services at a rate that satisfies their customers. In their search for fresh ideas, organizations often overlook the most significant source of new thought — their employees. Today's employees are knowledgeable and able to see opportunities or solutions to problems. This book describes a process for turning "great ideas" into actionable proposals. It presents a simple, but powerful set of questions that has proven to deliver a never-ending stream of inspiration to an organization. Although formal processes for project initiation, execution, and completion may be firmly embedded in an organization's project life cycle,

little is said about project origins. In Project Identification, the author provides a formal process that encourages and enables all of your employees, from the corporate suite to the college hire, to participate in the innovation process. The book presents a mechanism for identifying and capturing great ideas and inspired thought as new project proposals. It provides you with a repeatable process to organize, evaluate, and then select candidate projects for initiation. In the first part of the book, the author describes the complete project life cycle and explains how the Project Identification process complements the formal Project Management methodology. The book then presents a series of questions that guide the decision-making process for identifying new projects. For each question, the author includes an example from a real proposal that demonstrates how to craft useful content. The book concludes by explaining how to capture and manage each of the formal proposals and make sure they are properly considered. It details the transition of a candidate project to a live effort, ready for project initiation. This book can help streamline how your organization conceptualizes and approves projects. It will help you deliver a continuous source of fresh ideas for solving your most challenging business problems.
