[Control of Aggression](#) Oct 03 2022 Although aggressive behavior and its consequences has been a topic of concern for centuries, it is only within the recent past that serious attempts to understand aggression have been made. Within the last decade concern has expanded at a very high rate, perhaps impelled by an increase in aggression or the implication of an increase by frequent media reports of aggressive behavior. This apparent increased concern is matched by an increase in research. This volume brings together for the first time the diverse research strategies that reflect current major approaches to understanding the psychology of aggression. It deals with both basic laboratory research and the implications of such research for clinical work. Each chapter is designed to provide a databased analysis of aggressive behavior and an explanation of the research tactics used to obtain such data. Included in the book are a review of physiological variables in aggression; an assessment of neonatal variables in a developmental analysis of aggression; an examination of genetics and aggression; research on the Pain-Aggression hypothesis in human and non-human subjects; and an exposition of a social learning model of aggression. These analyses are significantly amplified by a moment-by-moment sequential analysis of the behavior of aggressive children, and by an examination of the role of semantic conditioning in the ontogeny of human aggressive repertoires. The final chapter (written by the editor) examines recurring problems in aggression research in general and considers points of consensus among the contributors to the volume. Control of Aggression will interest clinical psychologists and the full spectrum of other scientists engaged in research on the subject, including behavioral pharmacologists and biologists, geneticists, physiological and social psychologists, and sociologists.

It shows the evolution of teen portrayal, the potential consequences, and the ways policy-makers and parents can respond.

[Understanding and Treating the Aggression of Children](#) Feb 01 2020 Understanding and Treating the Aggression of Children: Fawns in Gorilla Suits provides a thorough review of the theoretical and research basis of the techniques and interventions in the treatment of aggressive and sometimes violent children. This is not a dry and sterile academic review but rather one that comes from work directly in the therapy room with thousands of hurting and in many cases traumatized children. One cannot read this book without being deeply moved and touched by the pain of these children and yet also be buoyed by their courage and willingness to persevere against formidable barriers. The metaphor of the fawn in a gorilla suit is introduced, followed by chapters covering developmental failures and invisible wounds, profound and unacknowledged losses, the implication of new findings from neuroscience, psychodynamics of aggressive children, risk factors when treating the traumatized child, special considerations when treating children in foster care, strengthening relationships with parents and helping them be more effective, enhancing relationships with direct care and instructional staff, developing mature defenses, and coping skills, creating a therapeutic milieu for traumatized children, and fostering hope and resilience.

Human Aggression and Violence Jul 20 2021 This book provides an impressive, well-rounded, authoritative overview of the latest research and theory about human aggression. Written by a diverse phalanx of highly respected experts, from evolutionary psychologists and behavioral geneticists to developmental, social, and clinical psychologists, the chapters offer a rich assortment of perspectives and an indispensable survey of issues, facts, and theories about why and how people hurt each other. It is an ideal introduction to the modern psychology of aggression for scholars and students, and a convenient reference for specialists, journalists, and the general public.-Roy F. Baumeister, author of *Evil: Inside Human Violence and Cruelty* This volume is an outstanding, integrated, biopsychosocial approach to aggression ranging over the contributions of genes, neurophysiology, early life influences, social relationships, personality, and cultures and exploring the "victim perspective." Edited by internationally renowned researchers in attachment and social relationships, this gem of a book provides detailed, up-to-date access to current work by world leaders in the field. The best way of dealing aggression and becoming more compassionate is to better understand the facilitators and inhibitors of aggression, and this volume significantly contributes to this important endeavor.ùPaul Gilbert, author of *The Compassionate Mind* In this exciting book, leading experts cover contemporary theory, research, and practice in the psychology of aggression and violence. There is something here for everyone interested in these topics: basic theory, up-to-date reviews, and practical applications. There is a broad range of approaches including evolutionary background, neuroscience and genetics, environmental influences, violence between groups, and the impact on victims.ùJohn Archer, School of Psychology University of Central Lancashire, Lancashire, United Kingdom Violence and aggression have existed as long, as humankind, and the need to understand and control these forces has only continued to grow throughout history. Thanks to the advance of psychological research within the social and behavioral sciences, as well as several other scientific disciplines, we have more knowledge than ever before about the genetic, developmental, interpersonal, and cultural causes of aggression. Yet these findings have not been integrated into meaningful discussions about how to transform aggression research into practical applications. With so many answers to the question "What makes a person violent?" there is surprisingly little insight into "How do we prevent violence?" In this comprehensive book, editors Phillip R. Shaver and Mario Mikulincer have assembled chapters from international experts to provide a broad-based and multidisciplinary analysis of aggression and violence, their negative consequences, and promising interventions. Five sections examine major theoretical perspectives, genetic and environmental determinants, and the psychological and relational processes underlying human violence and aggression. The tone of the book is realistic in its investigation of violence as an inherent part of human genetics and interaction, but hopeful in its exploration of research-based interventions aimed at reducing violence in future generations. In its assessment of aggression and violence across individual, relational and societal levels, this book will engage a broad audience. This book is part of the Herzliya Series on Personality and Social Psychology. Phillip R. Shaver, PhD., a social and personality psychologist, is Distinguished Professor of Psychology at the University of California, Davis. Before moving there, he served on the faculties of Columbia University, New York University, University of Denver, and State University of New York at Buffalo. He has coauthored and co-edited numerous books. He is a member of the editorial boards of *Attachment and Human Development*, *Personal Relationships*, the *Journal of Personality and Social Psychology*, and *Emotion*, and has served on grant review panels for the National Institutes of Health and the National Science Foundation. He has been executive officer of the Society of Experimental Social Psychology and is a fellow of both the American Psychological Association and the Association for Psychological Science. Dr. Shaver received a Distinguished Career Award from the International Association for Relationship Research and has served as president of that organization. *Understanding and Addressing Girls' Aggressive Behaviour Problems* Oct 30 2019 Understanding and Addressing Girls' Aggressive Behaviour Problems reflects a major shift in understanding children's aggressive-behaviour problems. Researchers used to study what went wrong with a troubled child and needed to be fixed; we now aim to understand what is going wrong in children's relationships that might create, exacerbate, and maintain aggressive-behaviour problems in childhood and adolescence. In this volume, leading researchers in the aggression field examine how problems develop for boys and girls in relationships and how we can help children to develop healthy relationships. Individual chapters explore biological and social contexts, including physical health and relationship problems that might underlie the development of aggressive behaviour problems. The impact of relationships on girls' development is illustrated to be particularly important for Aboriginal girls. Contributors discuss prevention and intervention strategies that help aggressive children build the requisite skills and relationship capacities and also shift dynamics within critical social contexts, such as the family, peer group, classroom, and school. The support of healthy development not only of children but of their parents and other important adults in their lives, including teachers has been shown to be effective in reducing the burden of suffering associated with aggression among children and adolescents—for youth themselves as well as their families, peers, schools, communities, and society.

**Childhood Aggression and Violence** Aug 01 2022 The conference on which this volume is based was one of a series of symposia initiated by the Department of Psychology at the University of Hawaii at Manoa on the theory and research surrounding topics of interest to the faculty and germane to the Hawaiian community. In order to encourage interaction around specific themes, the symposium series has assembled a small, select group of scholars to exchange knowledge, ideas, and enthusiasm with the resident faculty, students, and the community at large. The first two symposia concentrated on cross-cultural themes (Marsella, Tharp, & Ciborowski, 1979; Marsella, DeVos, & Hsu, 1985). The third one addressed a significant social problem: aggression and violence in children. At the time that our plan was being developed, Hawaii, along with mainland states, was experiencing or at least expressing widespread alarm over the involvement of children and youth in violent crime, in belligerence at school, as perpetrators of aggression at home, and as victims of physical abuse. This symposium was planned around a major area within the department, the Clinical Studies Program. The Clinical Studies Program has developed along two interrelated lines of concentration: one emphasized the foundation of clinical psychology in basic science and the other expanded its purview into the broader community, covering prevention, systems change, and social networks.

**The Neuroscience of Suicidal Behavior** Apr 04 2020 Nearly one million people take their own lives each year world-wide - however, contrary to popular belief, suicide can be prevented. While suicide is commonly thought to be an understandable reaction to severe stress, it is actually an abnormal reaction to regular situations. Something more than unbearable stress is needed to explain suicide, and neuroscience shows what this is, how it is caused and how it can be treated. Professor Kees van Heeringen describes findings from neuroscientific research on suicide, using various approaches from population genetics to brain imaging. Compelling evidence is reviewed that shows how and why genetic characteristics or early traumatic experiences may lead to a specific predisposition that makes people vulnerable to triggering life events. Neuroscientific studies are yielding results that provide insight into how the risk of suicide may develop; ultimately demonstrating how suicide can be prevented.

**The Neuropsychology of Aggression** Jul 28 2019 This volume is based on papers presented at a Workshop on the Neuropsychology of Aggression held at Newport Beach, California in March 1974. The Workshop was sponsored by the Neuropsychology Research Review Committee of the National Institute of Mental Health (Grant #MH-23355-01) and by the Department of Psychobiology of the University of California, Irvine. The goal of the Workshop was to review contemporary approaches to the study of aggression. Thus, the chapters of this book cover not only conceptual issues, but also experimental techniques of genetic analysis, neuroanatomy, neurophysiology, neuropharmacology and neuroendocrinology. It is hoped that these chapters will be of value to investigators of the many important problems of the nature of the biology of aggression. Especial thanks go to Mrs. Chris Johnson who played a major role both in organizing the Workshop and in preparing the manuscripts for publication. *Neurobiology of Aggression* Sep 21 2021 Aggression is a highly conserved behavioral adaptation that evolved to help organisms compete for limited resources and thereby ensure their survival. However, in modern societies where resources such as food, shelter, etc. are not limiting, aggression has become a major cultural problem worldwide presumably because of its deep seeded roots in the neuronal circuits and neurochemical pathways of the human brain. In *Neurobiology of Aggression: Understanding and Preventing Violence*, leading experts in the fields of the neurobiology, neurochemistry, genetics, and behavioral and cultural aspects of aggression and violence provide a comprehensive collection of review articles on one of the most important cross-disciplinary issues of our time. Rather than summarize the topics covered by each author in each chapter, I present a schematic diagram to guide the reader in thinking about different aspects of aggressive and violent behavior from its neurobiological roots to environmental factors that can either promote or prevent aggression to visions of some of the most horrific acts of violence of our times, and then towards the development of strategies to reduce aggressive behavior and prevent violence. It is hoped that *Neurobiology of Aggression: Understanding and Preventing Violence* will foster further research aimed at understanding the environmental genetic and neurochemical roots of aggression and how such information can be used to move forward towards the goal of eliminating violence.

›**Furor satiricus** Aug 21 2021 This study investigates the negotiation process involved in the definition of the latitude and license permissible in 'satirical' writing over a period of more than 200 years. Literature and literary theory are observed in communicative interaction with contemporary law, medicine, pedagogics and theology. The productive force inherent in the cultural taboo imposed on aggression manifests itself in theory formation and practice. The investigation closes with analyses of three texts enacting such negotiations in a literary form: Christian Thomasius' 'Ostergedanken' (1695), an excerpt from Bodmer/Breitinger's 'Mahler der Sitten' (1746), and Theodor Haecker's 'Dialog über die Satire' (1927).

**Aggression in Pornography** Jan 14 2021 Aggression in Pornography focusses on the issue of violence in mainstream pornography and examines what we know, what we think we know, and what are some surprising research findings and insights about the place of violence within pornography today. The authors first review the modern pornography industry, theoretical claims about pornography as violence, and the ways in which aggression has been defined and measured in previous research. Next, they review the findings of empirical research on violent content in pornographic materials and the potential effects of such content on audiences. The main part of the book relies on systematically collected empirical data, as the authors analyze the content of hundreds of pornographic videos as well as more than a hundred interviews with men and women who regularly watch pornography. These analyses provide surprising insights regarding the prevalence of and trends in violent content within mainstream pornography, the popularity of violent and non-violent content among viewers, and variations in aggression by race and sexual orientation. As such, Aggression in Pornography will be of interest to students and researchers in sociology, gender and sexuality studies, and media and film studies, as well as to wider audiences who are interested in today's pornography industry and to policymakers looking to devise empirically driven policies regarding this industry and its potential effects.
